The Learjet 45's cabin holds eight seats (in a double club layout) with plenty of room to swivel, recline, and track. The cabin's length and width are 19.8 feet and 5.1 feet, respectively. Don't be misled by these measurements; the interior of the Learjet 45 was designed to offer the most usable passenger space possible so that the passengers do not feel claustrophobic.

Other fine points of the cabin's design make it functional and comfortable, from worktables that fold down from the walls to an extra pressure relief port on the door for added passenger safety. The noise level in the cabin never exceeds 72 dB, and a two-zone temperature control system ensures that both the cabin and the cockpit are kept comfortable.
